---

They flare often. Its been the other caverns. And as the drilling progressed.

So that is no reason for excitement.

LDNR stated that the cavern is producing both gas and oil. They are flaring the gas at night.

This is why you may be getting phone calls.

What happened last week to cause the community to send Sam this message?  
Sam and I are going to talk later this evening

**Subject:** Urgent question

What does it take to get the EPA to step in to a situation? I.E., is it only by request of the governor of a specific state?

I ask because the residents of the Bayou Corne area of Louisiana are becoming increasingly concerned that 1) not enough is being done regarding the sinkhole and 2) not enough pertinent info is being communicated to the residents. At a town hall meeting held Thursday, the residents were near unanimous in their expressed desire to have the EPA step in.

So, how is it done? What can we do as citizens to make it happen?

Thank you, Sam. I've met you several times due to the BP disaster and you've always been very helpful. It was nice to know exactly who I wanted to email with these questions ....
